

This form is produced by code similar to that in the 'FormSubmit' sample, with the following differences:

- The default fields' values are:
 - First name: <your first name here>
 - Last name: <your last name here>
 - Subscribe to mailing list: yes
 - Additional info: <your info here>
- The 'Submit' and 'Reset' buttons are removed.
- A 'New field' is added to this form, its value is preserved.

When you fill and submit the form shown by the 'Import XML' sample (which is different from this one, but with similar fields), the sample server controller prepares an XML with the submitted data in the format used by `GcPdfDocument.ExportFormDataToXML()` method, creates a new instance of `GcPdfDocument`, and calls the `GcPdfDocument.ImportFormDataFromXML()` method to load the XML with the submitted data into it. The PDF with the loaded data is then sent back to the client, the result is what you see here, with your submitted data in the fields below.

First name:

Last name:
